

## **LOADING SYSTEM AND METHOD OF USE**

### **ABSTRACT OF THE DISCLOSURE**

5           A system and method for loading product onto a conveyor. The  
system includes a conveyor movable in at least a first direction and a  
metering section located proximate to at an end of the conveyor. The  
metering section includes a plate mechanism movable between a first  
position and a second position and a door adapted to be opened to a feeder.  
10       The door is at least partially supporting a predetermined amount of product  
and is positioned between a movable distance of the plate.
